

I would like to provide a brief rejection of the National Association of Broadcasters (NAB) petition number 04-160. I have been a loyal satellite radio listener for over a year and a half and have loved it. I still listen to local radio, but prefer the format of satellite radio and the wide variety of uncensored choices. Recently the traffic and weather stations have been made available and I have found the LA station #222 invaluable in rush hour traffic. I believe that the NAB is just trying to stop another viable competitor in the marketplace and rather than improve the quality of their broadcasts are trying to just squash the competition.
